

7 U.S. Code § 3401

Congressional findings and declaration of policy

(a) Wheat is basic to the American diet and the American economy. It is grown by thousands of farmers and consumed, in various forms, by millions of people in the United States.

(b) The size of the American wheat crop and how it is marketed and ultimately consumed determines whether many Americans receive adequate nourishment. Wheat has a strong impact on the Nation's well-being. Additional research on the optimal use of wheat products can improve the American diet. Consumer education about the nutritional value and economic use of wheat products can enhance the national welfare.
