

15 U.S. Code § 37b

Confirmation of antitrust status of graduate medical resident matching programs

(a) Findings and purposes

(1) Findings

Congress makes the following findings:

(A) For over 50 years, most United States medical school seniors and the large majority of graduate medical education programs (popularly known as “residency programs”) have chosen to use a matching program to match medical students with residency programs to which they have applied. These matching programs have been an integral part of an educational system that has produced the finest physicians and medical researchers in the world.

(B) Before such matching programs were instituted, medical students often felt pressure, at an unreasonably early stage of their medical education, to seek admission to, and accept offers from, residency programs. As a result, medical students often made binding commitments before they were in a position to make an informed decision about a medical specialty or a residency program and before residency programs could make an informed assessment of students’ qualifications. This situation was inefficient, chaotic, and unfair and it often led to placements that did not serve the interests of either medical students or residency programs.

(C) The original matching program, now operated by the independent non-profit National Resident Matching Program and popularly known as “the Match”, was developed and implemented more than 50 years ago in response to widespread student complaints about the prior process. This Program includes on its board of directors individuals nominated by medical student organizations as well as by major medical education and hospital associations.

(D) The Match uses a computerized mathematical algorithm, as students had recommended, to analyze the preferences of students and residency programs and match students with their highest preferences from among the available positions in residency programs that listed them. Students thus obtain a residency position in the most highly ranked program on their list that has ranked them sufficiently high among its preferences. Each year, about 85 percent of participating United States medical students secure a place in one of their top 3 residency program choices.

(E) Antitrust lawsuits challenging the matching process, regardless of their merit or lack thereof, have the potential to undermine this highly efficient, pro-competitive, and long-standing process. The costs of defending such litigation would divert the scarce resources of our country’s teaching hospitals and medical schools from their crucial missions of patient care, physician training, and medical research. In addition, such costs may lead to abandonment of the matching process, which has effectively served the interests of medical students, teaching hospitals, and patients for over half a century.
