

40 C.F.R. § 51.20

What are the emission thresholds that separate point and nonpoint sources?

- (a) All anthropogenic stationary sources must be included in your inventory as either point or nonpoint sources.
- (b) Sources that meet the definition of point source in this subpart must be reported as point sources. All pollutants specified in § 51.15(a) must be reported for point sources, not just the pollutant(s) that qualify the source as a point source.
