

40 C.F.R. § 53.2

General requirements for a reference method determination.

The following general requirements for a Federal reference method (FRM) determination are summarized in table A-1 of this subpart.

- (a) *Manual methods*—(1) *Sulfur dioxide (SO₂) and Lead*. For measuring SO₂ and lead, appendixes A-2 and G of part 50 of this chapter specify unique manual FRM for measuring those pollutants. Except as provided in § 53.16, other manual methods for lead will not be considered for a reference method determination under this part.
