

## 40 C.F.R. § 60.741

---

### Definitions, symbols, and cross-reference tables.

---

(a) All terms used in this subpart not defined below have the meaning given to them in the Act and in subpart A of this part.

*Coating applicator* means any apparatus used to apply a coating to a continuous substrate.

*Coating mix preparation equipment* means all mixing vessels in which solvent and other materials are blended to prepare polymeric coatings.

*Coating operation* means any coating applicator(s), flashoff area(s), and drying oven(s) located between a substrate unwind station and a rewind station that coats a continuous web to produce a substrate with a polymeric coating. Should the coating process not employ a rewind station, the end of the coating operation is after the last drying oven in the process.

*Common emission control device* means a device controlling emissions from an affected coating operation as well as from any other emission source.

*Concurrent* means the period of time in which construction of an emission control device serving an affected facility is commenced or completed, beginning 6 months prior to the date that construction of the affected facility commences and ending 2 years after the date that construction of the affected facility is completed.

*Control device* means any apparatus that reduces the quantity of a pollutant emitted to the air.

*Cover* means, with respect to coating mix preparation equipment, a device that fits over the equipment opening to prevent emissions of volatile organic compounds (VOC) from escaping.

*Drying oven* means a chamber within which heat is used to dry a surface coating; drying may be the only process or one of multiple processes performed in the chamber.

*Equivalent diameter* means four times the area of an opening divided by its perimeter.

*Flashoff area* means the portion of a coating operation between the coating applicator and the drying oven where VOC begins to evaporate from the coated substrate.

*Natural draft opening* means any opening in a room, building, or total enclosure that remains open during operation of the facility and that is not connected to a duct in which a fan is installed. The rate and direction of the natural draft across such an opening is a consequence of the difference in pressures on either side of the wall or barrier containing the opening.

*Nominal 1-month period* means a calendar month or, if established prior to the performance test in a statement submitted with notification of anticipated startup pursuant to 40 CFR 60.7(a)(2), a similar monthly time period (e.g., 30-day month or accounting month).

---

*Onsite coating mix preparation equipment* means those pieces of coating mix preparation equipment located at the same plant as the coating operation they serve.

*Polymeric coating of supporting substrates* means a web coating process that applies elastomers, polymers, or prepolymers to a supporting web other than paper, plastic film, metallic foil, or metal coil.

*Substrate* means the surface to which a coating is applied.
