
40 C.F.R. § 1065.280

Paramagnetic and magnetopneumatic O₂ detection analyzers.

(a) *Application.* You may use a paramagnetic detection (PMD) or magnetopneumatic detection (MPD) analyzer to measure O₂ concentration in raw or diluted exhaust for batch or continuous sampling. You may use good engineering judgment to develop calculations that use O₂ measurements with a chemical balance of fuel, DEF, intake air, and exhaust to calculate exhaust flow rate.
