

## 40 C.F.R. § 1068.415

---

### How do I test my engines/equipment?

---

- (a) Use the test procedures specified in the standard-setting part for showing that your engines/equipment meet emission standards. The test order will give further testing instructions.
- (b) If no test cells are available at a given facility, you may make alternate testing arrangements with our approval.
- (c) Test at least two engines/equipment in each 24-hour period (including void tests). However, for engines with maximum engine power above 560 kW, you may test one engine per 24-hour period. If you request and justify it, we may approve a lower testing rate.
