

## 40 C.F.R. § 112.11

---

### Spill Prevention, Control, and Countermeasure Plan requirements for offshore oil drilling, production, or workover facilities.

---

If you are the owner or operator of an offshore oil drilling, production, or workover facility, you must:

- (a) Meet the general requirements listed under § 112.7, and also meet the specific discharge prevention and containment procedures listed under this section.
- (b) Use oil drainage collection equipment to prevent and control small oil discharges around pumps, glands, valves, flanges, expansion joints, hoses, drain lines, separators, treaters, tanks, and associated equipment. You must control and direct facility drains toward a central collection sump to prevent the facility from having a discharge as described in § 112.1(b). Where drains and sumps are not practicable, you must remove oil contained in collection equipment as often as necessary to prevent overflow.
- (c) For facilities employing a sump system, provide adequately sized sump and drains and make available a spare pump to remove liquid from the sump and assure that oil does not escape. You must employ a regularly scheduled preventive maintenance inspection and testing program to assure reliable operation of the liquid removal system and pump start-up device. Redundant automatic sump pumps and control devices may be required on some installations.
