
40 C.F.R. § 147.305

Requirements for all wells.

(a) The owner or operator converting an existing well to an injection well shall check the condition of the casing with one of the following logging tools:

- (1) A Pipe analysis log; or
- (2) A Caliper log.

(b) The owner or operator of a new injection well cased with plastic (PVC, ABS, and others) casings shall:

- (1) Not construct a well deeper than 500 feet;
- (2) Use cement and additives compatible with such casing material;
- (3) Cement the annular space above the injection interval from the bottom of the blank casing to the surface.

(c) The owner or operator of a newly drilled well shall install centralizers as directed by the Regional Administrator.
