## 40 C.F.R. § 194.14

---

### Content of compliance certification application.

---

Any compliance application shall include:

- (a) A current description of the natural and engineered features that may affect the performance of the disposal system. The description of the disposal system shall include, at a minimum, the following information:
  - (1) The location of the disposal system and the controlled area;
  - (2) A description of the geology, geophysics, hydrogeology, hydrology, and geochemistry of the disposal system and its vicinity and how these conditions are expected to change and interact over the regulatory time frame. Such description shall include, at a minimum:
    - (i) Existing fluids and fluid hydraulic potential, including brine pockets, in and near the disposal system; and
