## 40 C.F.R. § 86.145–82

---

### Calculations; particulate emissions.

---

(a) The final reported test results for the mass particulate ( $M_p$ ) in grams/mile shall be computed as follows.

$$M_p = 0.43(M_{p1} + M_{p2})/(D_{ct} + D_s) + 0.57(M_{p3} + M_{p2})/(D_{ht} + D_s)$$

where:

- (1)  $M_{p1}$  = Mass of particulate determined from the “transient” phase of the cold start test, in grams per test phase. (See § 86.110–82(c)(1) for determination.)
- (2)  $M_{p2}$  = Mass of particulate determined from the “stabilized” phase of the cold start test, in grams per test phase. (See § 86.110–82(c)(1) for determination.)
- (3)  $M_{p3}$  = Mass of particulate determined from the “transient” phase of the hot start test, in grams per test phase. (See § 86.110–82(c)(1) for determination.)
- (4)  $D_{ct}$  = The measured driving distance from the “transient” phase of the cold start test, in miles.
