

## 40 C.F.R. § 63.522

---

### Definitions.

---

Terms used in this subpart are defined in the Act, in subpart A of this part, or in this section as follows:

*Administrator* means the Administrator of the U.S. Environmental Protection Agency, or any official designee of the Administrator.

*Affected source* means all HAP emission points within a facility that are related to the production of BLR or WSR, including process vents, storage tanks, wastewater systems, and equipment leaks.

*Basic liquid epoxy resins (BLR)* means resins made by reacting epichlorohydrin and bisphenol A to form diglycidyl ether of bisphenol-A (DGEBA).

*Batch emission episode* means a discrete venting episode that may be associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a vessel with HAP will result in a discrete emission episode that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. If the vessel is then heated, there will also be another discrete emission episode resulting from the expulsion of expanded vessel vapor space. Both emission episodes may occur in the same vessel or unit operation. There are possibly other emission episodes that may occur from the vessel or other process equipment, depending on process operations.
