

## Report on Supply Chain Compliance Volume 2, Number 21. November 07, 2019 EU enshrines 'right to repair'

By Sascha Matuszak

The European Commission <u>announced new regulations<sup>[1]</sup></u> that require companies manufacturing household appliances to make longer-lasting products and to supply spare parts for machines for up to 10 years. The regulations enshrine the "right to repair," part of the <u>European Union's Ecodesign Directive</u>, <sup>[2]</sup> which establishes a framework to set mandatory ecological requirements for energy-using and energy-related products sold in all 28 EU member states.

The <u>regulations<sup>[3]</sup></u> currently cover the following appliances:

- Household refrigerators.
- Light sources.
- Electronic displays.
- Dishwashers.
- Washing machines and dryers.
- Motors.
- Power transformers.
- Welding equipment.

"Whether it is by fostering repairability or improving water consumption, intelligent eco-design makes us use our resources more efficiently, bringing clear economic and environmental benefits," <u>said Jyrki Katainen</u>, La European Commission vice-president for jobs, growth, investment and competitiveness. "Figures speak for themselves: these measures can save European households on average €150 per year and contribute to energy savings equal to annual energy consumption of Denmark by 2030. It is with concrete steps such as these that Europe as a whole is embracing the circular economy to the benefit of citizens, our environment and European businesses."
