

## 42 C.F.R. § 84.163

---

### Man test for gases and vapors; Type C supplied-air respirators, demand and pressure-demand classes; test requirements.

---

- (a) The completely assembled respirator will be worn in a chamber containing 0.1 ±0.025 percent isoamyl acetate vapor, the intake of the hose will be connected to a suitable source of respirable air, and not more than 25 percent of the hose length will be located in isoamyl acetate-free air.
