

## 29 C.F.R. § 810.505

---

### Scope of verification.

---

(a) The Administrator may verify, through investigation, whether the producer complied with the high-wage components of any part of the LVC requirements, including material and manufacturing expenditures, technology expenditures, and assembly expenditures. The producer is responsible for all aspects of compliance with the high-wage components of the LVC requirements at its plants and facilities as well as the plants or facilities of the suppliers and contractors listed in the producer's certification.

(1) For verifications of the wage component of high-wage material and manufacturing expenditures, the Administrator may verify whether the average hourly base wage rate in any plant or facility relied on by the producer in its certification meets the US\$16 per hour requirement. If the producer's certification includes transportation or related costs for shipping as part of its LVC calculation, the Administrator may verify whether any transportation, logistics, or material handling provider relied on by the producer in its certification meets the US\$16 per hour requirement.
