As your organization's HIPAA privacy and security officer, you cited a report by Cybersecurity Ventures stating a business is expected to fall victim to a ransomware attack every 11 seconds.^[1] Cyberattacks occurs when malicious software is used to restrict access to a computer system or data until the victim pays ransom requested by the criminal. You have provided the board with the Office for Civil Rights (OCR) cybersecurity ransomware guidance material published July 11, 2016,^[2] and have discussed how to lower risks of a cyberattack.
