
40 C.F.R. § 1090.1355

Calculation adjustments and corrections.

Adjust measured values as follows:

(a) Adjust measured values for total vapor pressure as follows:

$$\text{RVP (psi)} = 0.956 \cdot P_{\text{total}} - 0.347$$

Where: P_{total} = Measured total vapor pressure, in psi.

(b) For measuring the sulfur content and benzene content of gasoline, adjust a given test result upward in certain circumstances, as follows:
