
40 C.F.R. § 1090.505

Gasoline produced from TGP.

- (a) *General provisions.* (1) A transmix processor or blending manufacturer that produces gasoline from TGP must meet the requirements of this section.
- (2) A transmix processor must not use any feedstock other than transmix to produce TGP.
- (3) A transmix processor or blending manufacturer may produce gasoline using only TGP, a combination of TGP and PCG, a combination of TGP and blendstock(s), or a combination TGP, PCG, and blendstock(s) under the provisions of this section. A transmix processor or blending manufacturer may also blend fuel additives into gasoline in accordance with §§ 1090.260 and 1090.265.
- (b) *Demonstration of compliance with sulfur per-gallon standard.* (1) A transmix processor or blending manufacturer that produces gasoline with TGP must meet one of the following sulfur standards for each batch of gasoline they produce, as applicable:
