Checklist for Implementing, Expanding Research: Reviewing Compliance, Finances, Patient Volume

By Nina Youngstrom

The Food and Drug Administration's April draft guidance for diversity in clinical trials is a new area to incorporate, but there are other factors to consider when implementing or expanding research. Here's a checklist to help organizations help think them over. It was developed by PYA in conjunction with Rhonda Paz, Managing Principal of Clinical Trial Administrators. Contact her at rhonda@ctadministrators.org.

1. Organizational Support

- a. Is leadership looking for a new revenue opportunity?
- b. Is leadership looking for ways to enhance the organization's reputation and/or differentiate it from competitors?
- c. Is the organization looking for ways to minimize outmigration and attract new patients?
- d. Does the organization desire to achieve or maintain specialized accreditations requiring clinical trial participation?
