## 40 C.F.R. § 1031.130

---

### Derivative engines for emissions certification purposes.

---

(a) *Overview.* For purposes of compliance with exhaust emission standards of this part, a type certificate applicant may request from the FAA a determination that an engine configuration be considered a derivative engine for emissions certification purposes. The applicant must demonstrate that the configuration is derived from and similar in type design to an engine that has a type certificate issued in accordance with 14 CFR part 33, and at least one of the following circumstances applies:

- (1) The FAA determines that a safety issue requires an engine modification.
- (2) All regulated emissions from the proposed derivative engine are lower than the corresponding emissions from the previously certificated engine.
